

Cambrionix Connect is a software platform that allows users to monitor, control and update devices remotely and simultaneously using Cambrionix hubs.

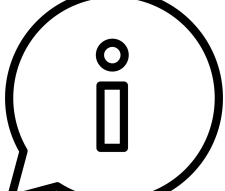

Every Cambrionix solution includes a **license of Connect Premium**, designed for enterprise-level use with advanced power, automation, and management needs.

Connect Premium features		
DFU mode (Device Firmware Update)	Place iOS devices and Apple silicon Macs with USB-C into DFU mode with one click or API command.	Available with <b>ThunderSync5-C16 PD</b> and <b>ThunderSync3-C10</b> hubs
Power Delivery profile selection	Monitor live current draw per port and intelligently distribute up to 285W across 16 ports, with flexible profiles from 4.5W up to 60W per port.	Available with <b>ThunderSync5-C16 PD</b>
Port mode scheduling	Turn all ports on or off at defined times, or combine with Target Charge for smarter energy management at the hub level.	Available with <b>all Cambrionix hubs</b>
Target charge mode	Set charge limits in 5% increments to preserve battery health and save energy. Schedule charging sessions to align with your test cycles.	Available with <b>all Cambrionix hubs</b>

All Cambrionix customers receive **lifetime access to Connect Standard** with no license needed, including the following features:

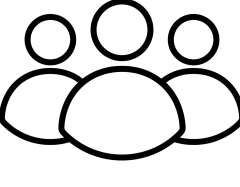

Remote access to your entire device fleet from a single location

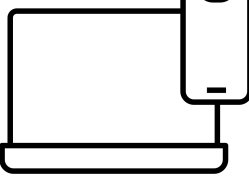

Local and remote information of every connected device

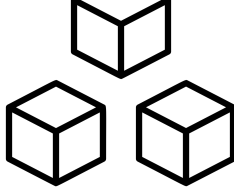

Smart offline monitoring of hubs and devices

Team collaboration with pre-defined user access roles

Create groups of hubs and devices for better management

Add user-defined data and attributes for easy device navigation

Sign in --> onboard device fleet --> manage hubs and devices from anywhere in the world.
